FOUNDATION MODELS & SYSTEMS RESEARCH

AUTHOR & SYSTEMS ENGINEER

Nylon V1 (338M) — Autoregressive Foundation Model — Enigmare AI Research — Aug 2026 · hf.co/enigmare/nylon-v1

- **Pretraining (5.36B Tokens, < $100 Budget):** Pretrained a 337.96M parameter GPT-2 stack (24 layers, 16 heads, d=1024, FlashAttention SDPA) from scratch on a 5.36B-token curated corpus across 2× NVIDIA RTX 5090 GPUs for under $100 total compute budget (sustained 41,161 tokens/sec), converging to 2.1804 validation loss (8.8498 perplexity).
- **Full-Stack Alignment:** Executed 2-stage post-training: Supervised Fine-Tuning (SFT) over 283.7M tokens (validation perplexity 3.0042) followed by 8,841 steps of Direct Preference Optimization (DPO, eval loss 0.6447, reward margin 1.1143).
- **Local Deployment:** Shipped quantized GGUF weights to Hugging Face, enabling instant zero-setup local execution via `ollama run hf.co/enigmare/nylon-v1`.

Nylon-Tokenizer: Hardware-Aligned Byte-Level BPE — Enigmare AI Research — Sep 2026 · Technical Report No. 01

- **Hardware-Aligned Storage (V = 65,536):** Co-designed subword vocabulary strictly to 2^{16} boundary for native `uint16` disk serialization, halving 120B pretraining token array footprint from 480 GB to 240 GB and doubling OS page-cache token residency.
- **Domain-Aware Pretokenization & Merge Induction:** Preserved atomic decimal place boundaries (1.00 BPT), compressed code indentation up to 8.0x, and normalized African tonal languages. Implemented inverted pair index completing 65,266 merges across 501.2 MB text in 52.79 seconds.

WORK EXPERIENCE

Paypaxe — Backend & Mobile Systems Developer — Dec 2024 – Present · Nigeria

- **Fintech Infrastructure:** Engineered core backend microservices for automated cooperative savings, double-entry wallet ledgers, and statutory PAYE payroll tax calculation engines ensuring high reliability and audit compliance.
- **Wallet & Payment Gateway:** Architected digital wallet infrastructure integrating banking APIs, automated webhook reconciliation, and Remita payment processor pipelines for high-throughput transactions.
- **Mobile Client:** Shipped cross-platform React Native iOS and Android application featuring biometric authentication, real-time balance updates, and offline-first state synchronization.

NoteIQ — Lead Full-Stack Engineer — Jan 2026 – Present · noteiq.live

- **Knowledge Extraction:** Architected multi-modal ingestion pipeline converting audio recordings, documents, and meeting notes into structured markdown summaries using vector retrieval and LLM inference services.
- **Real-Time Client & Sync:** Designed cross-platform web and mobile clients with sub-50ms optimistic UI updates, WebSocket synchronization, and encrypted local storage.
- **Data Security:** Implemented secure sandboxed document parsing and role-based data isolation compliant with data security standards.

Luckywho — Backend Developer — Dec 2023 – Dec 2024 · Nigeria

- **Algorithm Optimization:** Engineered core seeded ticket generation engine with collision avoidance and O(1) verification, eliminating database lock contention during concurrent peak raffle draws.
- **Payment & Deployment:** Integrated Terraswitch payment processor and containerized microservices using Docker on AWS EC2, leading 2 frontend engineers to deliver ahead of schedule.

Rogers and Co — Full-Stack Developer — Feb 2024 – Dec 2024 · Contract

- Developed client e-learning platform with role-based access control (RBAC) across students, instructors, and parents, utilizing Redux Toolkit for real-time state synchronization.

TECHNICAL SKILLS

Languages & Runtimes:	Python, JavaScript (ESNext), TypeScript, Node.js, SQL, Bash
Systems & AI:	Byte-Level BPE, Tokenizer Design, PyTorch, uint16 Sharding, Inverted Pair Index, Regex Engineering, Vector Embeddings
Backend & Databases:	PostgreSQL, Redis, RESTful Microservices, Ledger Logic, ERP/Payment Integrations (Remita, Terraswitch)
Frontend & Mobile:	React, React Native (iOS & Android), Redux Toolkit, Tailwind CSS, Responsive Web Design
DevOps & Tooling:	Docker, AWS (EC2/S3), Git, GitHub Actions, Linux Systems Administration, CI/CD

EDUCATION

Sokoto State Polytechnic — National Diploma in Mechanical Engineering — Graduated 2022 · **CGPA: 3.64 / 4.00**
